

1. High Tech Line – RIP

	Sizes	Windrange
RIP HT 32:	132 x 40 cm	11-40 knts.
RIP HT 35:	135 x 42 cm	10-34 knts.
RIP HT 37:	137 x 44 cm	9-29 knts.
RIP HT 39:	139 x 47 cm	8-25 knts.

Features:

- **3-D-shape + full suspension tips**

The HT-Boards have a Full 3D-Shape that combined, with the by Spleene developed Full Suspension Tips provides maximum Flex where it is needed, on the tips around the fin-area. The results are improved suspension characteristics and better shock absorption, which lead to more control and ride-comfort.

- **Jet bottom Technology**

This Shape-Detail describes a Channel on the underside of the Board. It allows the board to plane more freely and earlier. Compared to a simple concave the Jet Bottom provides significantly more "edge bite" as it channels the waterflow along its edges. Even in choppy conditions the difference is very noticeable.

- **advanced waterflow release**

The new Tip Outline (concave curve in the Tip-Area) allows for a much better water release, which in turn produces significantly less drag.

- **Full-Wood-Core made from "Paulownia-Wood"**

The significantly reduced weight of the '09 Spleene Boards in comparison to last year's models is immediately noticeable and provides them with much better acceleration and a more dynamic take-off. The new '09 boards are now up to 1,3 kg lighter, which improves their overall ride-performance, provides a more direct feel and better control in overpowered conditions.

- **Classic Convex Outline + New Concave Tip-Outline**

Thanks to the change of the outline on the new RIP's we were able to reduce the overall board-length without sacrificing their early planing abilities. At the same time, the increased surface area on the tips provides the boards with more pop and "loaded jumps" become more radical.

- **Railgraps** for better grip (when carrying or for board-offs)

Accessories:

- **G10 Fins:** 4 x 4,7 cm dyed G10 Material
- **Diamond Pad:** Ultra soft 3D-Injection-Moulded-Pad with comfort-grip
- **TB-Strap:** Soft Adjustable-Strap, fitting does not require any tools
- **Grab-Handle**

The RIP 32 and RIP 35 are the boards for the middle to upper windrange. The RIP 37 is the successor of the popular RIP Plus '08 and is thus the ideal board for a "One-Board-Quiver". It covers a massive windrange and feels at home in all conditions. The RIP 39 replaces last years RIP Max and is perfect for the lower to middle windranges. The new Rocker-line makes all of the new boards feel even smaller under foot.

2. High Tech Line – SESSION

	Sizes	Windrange
Session HT 41:	141 x 43 cm	8-24 knts.

Features:

- **3-D-shape + full suspension tips**

The HT-Boards have a Full 3D-Shape that combined, with the by Spleene developed Full Suspension Tips provides maximum Flex where it is needed, on the tips around the fin-area. The results are improved suspension characteristics and better shock absorption, which lead to more control and ride-comfort.

Accessories:

- **G10 Fins:** 4 x 4,7 cm dyed G10 Material

- **Diamond Pad:** Ultra soft 3D-Injection-Moulded-Pad with comfort-grip

- **TB-Strap:** Soft Adjustable-Strap, fitting does not require any tools

- **Grab-Handle**

The Session covers the middle windrange and thanks to its concave outline rides at an extreme angle to the wind. It is the link between the RIPs, for more wind and the Doors for extremely light winds. Because of its short overall length it remains very manoeuvrable. The new Rocker-line makes all of the new boards feel even smaller under foot.

3. High Tech Line – DOOR

	Sizes	Windrange
Door HT 59:	159 x 45 cm	6-22 knts.
Door HT 64:	164 x 50 cm	5-20 knts.

Features:

- **3-D-shape + full suspension tips**

The HT-Boards have a Full 3D-Shape that combined, with the by Spleene developed Full Suspension Tips provides maximum Flex where it is needed, on the tips around the fin-area. The results are improved suspension characteristics and better shock absorption, which lead to more control and ride-comfort.

- **TB-Strap:** Soft Adjustable-Strap, fitting does not require any tools
- **Grab-Handle**

The Doors are the ultimate light-wind boards. Depending on rider-weight and ability you can choose between the Door 59 for general light-wind riding or the Monsterdoor (Door 64) for extreme light-wind riding and/or for heavier riders. Because of the significant weight reduction compared to last years models, both new HT Doors feel a lot more agile and much smaller under foot.
